

WHITE PAPER INKAGOLD

INTRUDUCTION INKAGOLD PROJECT:

INTRUDUCTION INKAGOLD PROJECT:

We are all aware that our planet deteriorates day by day, especially our environment. Industrial pollution of all its ranges is affecting and transforming our planet into a harmful and almost uninhabitable place. One of them is the constant deforestation of the areas where trees are produced, which is the main element to produce oxygen and the absorption of CO2.

REFORESTATION OF 10,000 HECTARES WITH CAPIRONA TREES

For this reason, we have proposed to reforest our Amazon, which is the lung for oxygen production and CO2 absorption. With the reforestation of 10 thousand hectares of deforested lands, we will be contributing to the balance of the environment.

The ten thousand hectares will be publicly audited to continue obtaining payments for CO2 consumption, which is regulated by the United Nations and signed by governments, especially Peru.

ASSET VAUE

- The asset portfolio valued at a total of 5 trillion US dollars will be the foundation of value and support for INKAGOLD. In this way, each holder of the currency will be able to obtain their investment made during the circulation of the INKAGOLD cryptocurrency.
- PURCHASE OF REFINED GOLD FOR THE PERMANENT BACKUP OF INKAGOLD
- On the other hand, Peru is a gold-bearing area where a lot of gold is produced. For this reason, within this project, we consider the purchase of refined gold with a purity of 999.9, which will be stored in our own warehouse and publicly audited in the international system, so that it serves as support for INKAGOLD during its use and circulation, and from there its value can be located and used as a monetary payment or internationally without having to resort to traditional banks.
- Why INKAGOLD? South America is one of the strongholds where gold exists in large quantities, especially in the Peruvian Andes. Since time immemorial, it has been extracted and continues to be extracted until today, where today's buyers are financial companies which are accumulating because the great battle is coming of who will be the international currency standard that supports and has real support. This battle is not today; it has been fought for decades and it is necessary that there be a currency with real backup assets, in this case, it should be gold as the main element and then the other assets that are also considered financial assets due to their worth.

- We plan that INKAGOLD will reach at least 10 dollars. Everything will depend on how much we have in circulation; the more circulation we dedicate to it, the more value INKAGOLD will have.
- Each user is the direct owner of their currency obtained from INKAGOLD. EACH USER HAS CONTROL OF 100% of their wallet, and each user has full freedom of their use of INKAGOLD.
- Our EXCHANGE platform, as well as <https://pancakeswap.finance/swap> and <https://www.binance.com/> , are faithful witnesses of the value of INKAGOLD and are the buying and selling window, which makes the real value legitimate by INKAGOLD.
